

Towards a safer world.

SITUATIONAL AWARENESS. WITH ADDED PUNCH.

Intelligence during operations is critical to survival. The Surveillance Target Acquisition and Weapon Sight (STAWS) combines advanced uncooled thermal imaging technology with a high-resolution TV camera to provide 24-hour, all-weather battlefield awareness. Designed for future sensor formats and additionally configured to receive a Laser Range Finder, STAWS' fully integrated architecture is engineered for under-armour operation with the latest generation of remote-control weapon stations.

From detection to protection. Tomorrow's technology is here today.
