

SPECIALIST CAPABILITIES TO MEET YOUR INDIVIDUAL NEEDS

Specialist capabilities and processes have been developed at the Machined Components Centre (MCC) for use in the component manufacture required for Vacuum Tube technology.

COMPREHENSIVE SERVICE

We have extensive experience of manufacturing parts using materials such as Oxygen Free High Conductivity Copper, Nickel, Nickel Alloys, Molybdenum and Pure Iron.

In addition to conventional machining, we employ processes like Conventional and Deep Drawing, Wall Ironing, Wire Eroding and Brazing in a reducing atmosphere.

We use procedures such as controlled heat treatments and solvent cleaning to ensure that your components reach you in perfect condition.

Our experienced Engineers can advise on Design for Manufacture, reducing your lead times and costs.

COMPLETE MANUFACTURING SOLUTION

With all of these capabilities under one roof, the MCC are able to maintain control over the manufacture of your components, from receipt of drawings through to final delivery. Whilst other companies rely on third party sub-contractors to perform some operations, we can provide the complete manufacturing solution.

CUSTOMER FOCUS

We have an excellent track record on delivery and quality performance, achieved through long-term partnerships. We can meet the demanding standards required by high-tech companies.

Specialist Capabilities

Manufacturing quality components to demanding customer requirements

KEY BENEFITS

SELEX GALILEO is maintaining a lead in precision manufacturing technology.

- Proven delivery and quality track records
- Full engineering support
- Design for Manufacture to reduce your costs and lead times
- Wide range of materials
- Cleaning and furnacing
- Forming tolerance $\pm 0.05\text{mm}$ (material dependant)
- Complete manufacturing solution, under one roof.
