

## OUR APPROACH

At SELEX Galileo Inc., we believe that every challenge has a solution, and our mission is to work with you every step of the way to help you find it. Together, we are partners in your success.

We leverage the international background of our parent company to bring you a diverse portfolio of state-of-the-art technologies combined with a proven track record of quality products and services. This means we have a strong understanding of what you, our customer, needs.

So, we built this facility with you in mind. It is as flexible and adaptable as your mission requirements. That is the foundation of our service offering.

We go beyond products to bring you holistic and targeted solutions defined by your needs. We leverage the breadth of our technological portfolio to enhance our ability to help you identify, classify, and combat external threats.

### Why did we choose the Stennis location?

Stennis is a unique facility. It is located on the Stennis International Airport, and situated alongside NASA's acoustic easement zone. No habitable structures can be built in this area. This allows for 24/7 operations without the risk of noise complaints or urban encroachment. The airport boasts a C-5 capable 8,500 foot runway, as well as close proximity to the Gulf Coast. Here, you can conduct air, land, and maritime operations without interruption.

### How can Stennis help your mission?

The SELEX Galileo Inc. facility provides a fully integrated service loop, from cutting edge products, to installation and modification services, and follow-on product support. The site spans 59,000 square feet of space that includes a fully-modernized C-130 capable hangar with electrical and mechanical fabrication capabilities. This multifunctional site is the ideal facility to provide solutions for your integration and training needs.

Together with our partners of Stennis International Airport and Hancock County, we have worked hard to provide an unrivaled set of capabilities tailored to your mission requirements.

**Whatever the scenario, the Stennis facility is your solution.**
